Andrew Weil Center for Integrative Medicine

Construction Project Update

July 18, 2022

# The Adventure Has Begun!

## Good Luck UA-AWCIM Project Team!

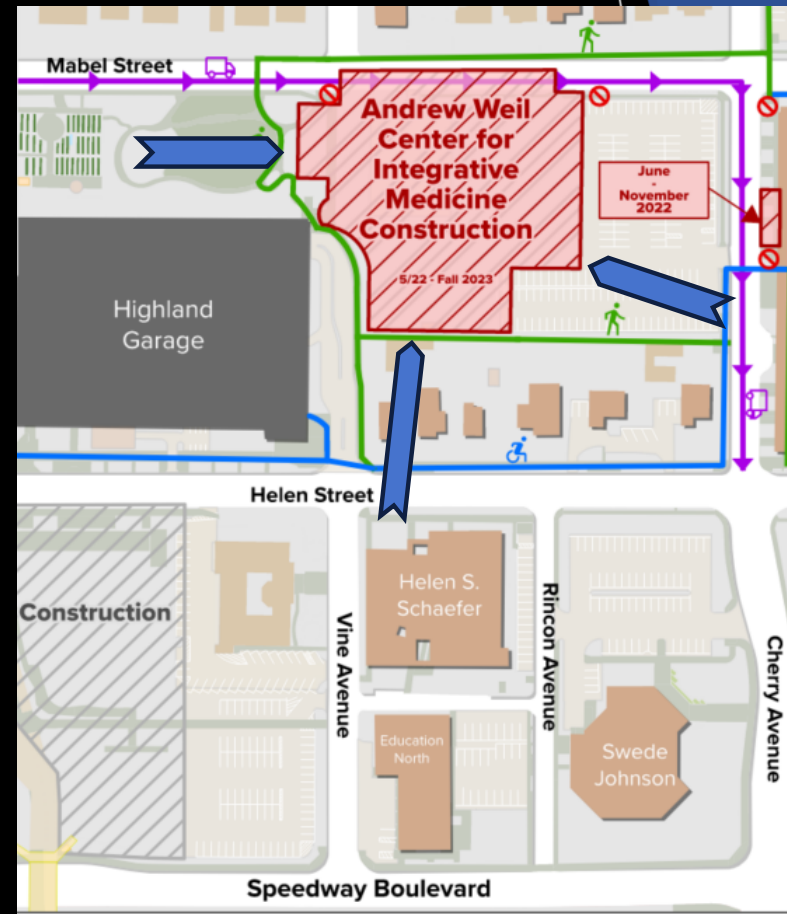

# PROJECT LOCATION AND LOGISTICS

The Andrew Weil Center for Integrative Medicine project is located on the corner of Mabel and Cherry, between the Bioscience Research Laboratories and the Highland Garage.

The Project includes the construction of three buildings - the Main Building and two smaller buildings.

Each structure is built with exposed natural materials, including: concrete, concrete masonry units, steel, and glass. Surrounded by native Sonoran Desert plantings, these materials help the building blend into the natural landscape.

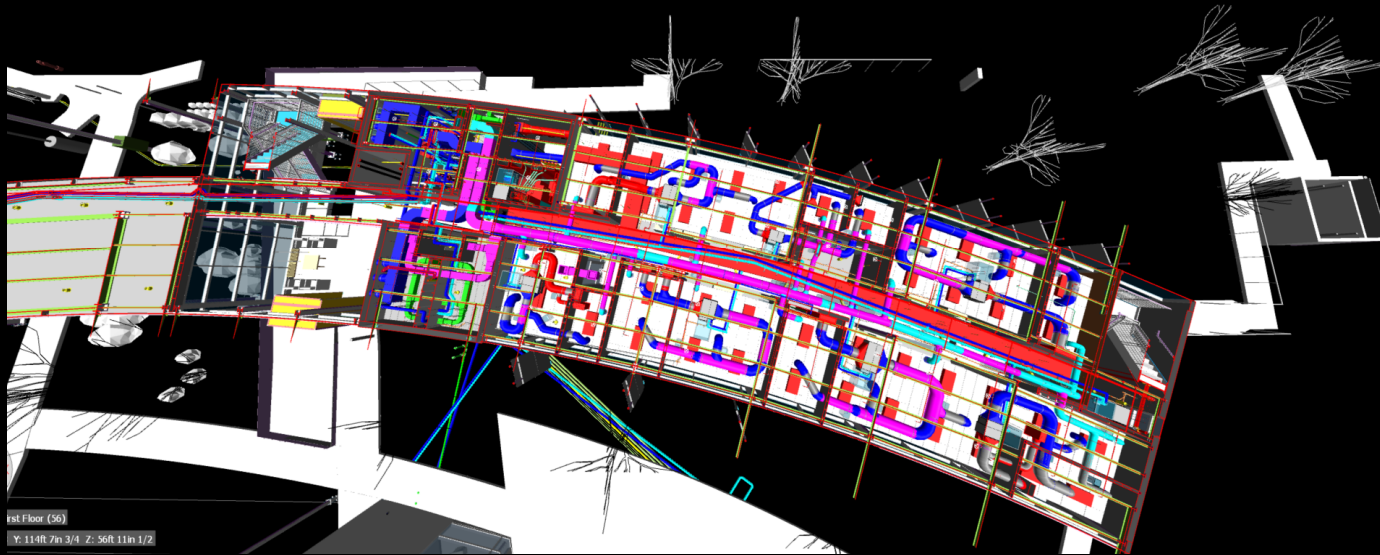

# PROGRESS PICTURES

The pre-planning and preparation for installation of the building's Mechanical, Electrical, Plumbing and Structural systems are being coordinated virtually by the Project Team using BIM (Building Information Modeling). A typical BIM plan is shown here.

# DID YOU KNOW...

The amount of dirt excavated on this project is close to 4,000 cubic yards! One cubic yard of dirt weighs around the same as a Volkswagen Beetle!
