Construction Project Update

November 21, 2022

PROGRESS UPDATE

This month the CMU (Concrete Masonry Unit) walls are on their way up. These walls will be an exposed, finished product, so quality is critical. The architect and the UA Planning, Design, and Construction team are onsite regularly to perform inspections and help ensure that the quality is maintained throughout the entire process.

PROGRESS UPDATE

The University of Arizona campus has a network of different utilities, including chilled water lines that cool the air for Air Conditioning. This month we performed a “hot tap” on the main chilled water lines that run through the site for the connection that will feed AWCIM once complete.

A hot tap requires coring into and connecting to an existing utility line while it is still in operation.

Keep up with the project in real-time by looking at the live footage on the UA PDC website.
